

COMPANY INTERVIEW QUESTIONS

WHAT WE SEEK TO LEARN

SECTION 1 — INTRODUCTION & COMPANY BACKGROUND

This section aims to understand the company, the interviewee's role, and how 3D design software is currently used in their day-to-day engineering work. It provides background information that will help us understand the answers given later in the interview.

SECTION 2 — CURRENT USE OF AI & NEW TECHNOLOGY

This section aims to identify whether the company is currently using AI or other new technologies within its engineering workflow. We also want to understand which tools they use, what benefits or problems they have experienced, and whether they are interested in upcoming AI and CAD developments.

SECTION 3 — BUDGET & INVESTMENT

This section aims to understand how the company approaches investment in new engineering software and AI technologies. We want to learn whether there is a budget available, what factors influence purchasing decisions, and what would make the company willing to invest in a new tool.

SECTION 1 — INTRODUCTION & COMPANY BACKGROUND

1. Could you briefly introduce yourself and your role within the company?
2. Could you briefly describe what your company does?
3. What type of engineering or design work are you personally involved in?
4. What 3D designs or CAD software does your company use?
Key software that interest us: SolidWorks, Autodesk Inventor, ect.
5. How important is 3D design software to your company's day-to-day operations?
Ask them to give us examples.
6. Which departments or employees use this software most frequently?
7. What are the main tasks for which you use 3D design software?
They may answer: modelling, assemblies, drawings, simulations, manufacturing preparation, or documentation.
8. How long has your company been using its current 3D design software?

SECTION 2 — CURRENT USE OF AI & NEW TECHNOLOGY

1. Is your company future looking with AI
We may want to rephrase this
2. Is your company currently using any AI-powered tools in engineering or 3design?
3. If yes, which AI tools or software features are you currently using?
4. What tasks do you use these tools for?
5. How often are these AI tools used in your normal workflow?
6. Have these tools changed the way engineers or designers work within the company?
7. Are there any AI tools or features that your company is interested in using but has not been adopted yet? Why?

8. Does your company actively follow new releases and updates from CAD or engineering software providers?
9. Are there any upcoming AI or CAD features that you are particularly interested in testing?
SolidWorks 2027 is coming out with integrated AI portal is something they may answer
10. What would make your company more likely to adopt a new AI-based engineering tool?
Looking for answers like: lower cost, proven reliability, time savings, better integration, or easier training.
11. What concerns would prevent your company from using an AI tool?
Looking for answers like: accuracy, data security, intellectual property, cost, or lack of trust.

SECTION 3 — BUDGET & INVESTMENT

1. Does the company have a dedicated budget for new engineering software, AI tools, or digitalization?
2. When considering new software, how important is the cost compared with the potential productivity improvement?
3. Would the company be willing to pay more for software if it could clearly reduce engineering time or workload?
4. Who normally decides whether new engineering software is purchased or introduced?
5. Does your company prefer purchasing established tools, or are you also willing to experiment with newer technologies?
